PROFESSIONAL SUMMARY

B.Tech student in Artificial Intelligence & Data Science with hands-on academic project experience in Python, machine learning, computer vision, data analytics, and web development. Built projects involving route optimization, MRI-based brain tumor analysis, dashboards, customer segmentation, predictive analytics, and data-cleaning automation. Seeking entry-level or internship opportunities where I can apply AI/ML and data skills to practical problems while continuing to grow as a software professional.

TECHNICAL SKILLS

- **Programming:** Python, SQL, Java (Basic)
- **AI / Machine Learning:** Artificial Intelligence, Machine Learning, Deep Learning, Computer Vision, TensorFlow
- **Data & Analytics:** Power BI, Microsoft Excel (Advanced), Data Cleaning, Data Visualization, Predictive Analytics
- **Web Development:** HTML, CSS, Flask
- **Core CS:** Data Structures, DBMS, Algorithms, Operating Systems, Computer Networks

PROJECTS

OptiVoyage — Route Optimization System

- Analyzed transit datasets to identify bottlenecks and applied data-driven algorithms to improve transportation efficiency, with a focus on reducing travel time and fuel consumption.

NeuroVision / Brain Tumor Detection

- Developed an AI-powered web application for brain tumor detection and severity analysis from MRI scans using deep learning, Flask, and Grad-CAM explainability to present predictions and visual insights.

Gesture Into Text

- Developed an AI/computer-vision project focused on converting hand gestures into text, applying image/vision processing concepts to improve accessibility and human-computer interaction.

Artificial Tree

- Developed an artificial tree concept using algae and fungi to absorb CO₂ from the air. Designed to produce oxygen through biological processes, offering a sustainable approach to improving air quality.

Sales & Revenue Analysis Dashboard

- Created an interactive dashboard to analyze sales performance, revenue trends, and KPIs using data-visualization techniques for business decision support.

Customer Segmentation

- Built a customer segmentation model using customer behavior and demographic data to identify meaningful customer groups for targeted business strategies.

EDUCATION

B.Tech— Artificial Intelligence & Data Science | J.P. College of Engineering, Tenkasi | Expected Graduation: 2028

Relevant coursework: Data Structures, DBMS, Python, Fundamentals of Data Science, Design & Analysis of Algorithms, Operating Systems, Artificial Intelligence, Machine Learning, deep learning, big data analysis, digital marketing, ui&ux, Computer Networks, DPCO.

CERTIFICATIONS & WORKSHOPS

- Microsoft Azure AI Fundamentals (AI-900)
- Python Certification & Data Science Workshop; Data Science & Analytics Course — HP Foundation
- AI for Business Professionals
- Microsoft Azure Machine Learning & Generative AI learning
- Power BI Workshop & Digital Skills Program
- Advanced Computer Vision with TensorFlow — Infosys
- StockMarketUsing AI Workshop; TechDiscovery Workshop — Maker Village, Kochi

HACKATHONS & ACHIEVEMENTS

- Participant — Smart India Hackathon (SIH)
- Participant — MSME Hackathon 5.0
- Selected for Round 2 — Tenkasi Hackathon
- Selected for Round 2 — Hackathon360 (EC Learnix)

ADDITIONAL DATA PROJECTS

- Predictive Analytics Using Historical Data — created a model to forecast future trends and support data-driven planning.
 - Data Cleaning & Reporting Automation — designed an automated workflow to clean, preprocess, validate datasets, and generate reports and visual summaries.
-
